

Strata Owned Embedded Network Support for Residential Communities

thenrgcompany.com.au

Property managers can find the situation overwhelming as residential buildings expand and electricity use rises across common areas and individual apartments. Energy supply no longer stays simple in larger developments, especially where multiple residents share infrastructure and services. A **strata owned embedded network** gives buildings a single system to manage electricity while tracking usage at each property level.

Strata Owned Embedded Network Support for Residential Communities

thenrgcompany.com.au

The NRG Company supports strata communities across NSW by handling embedded network operations and resident support. The team manages meter readings, billing, reconciliations, compliance reporting, and day-to-day resident queries. Property managers rely on this solution to reduce manual workload and keep electricity management consistent across the building. Residents receive direct support for account setup, move-ins, move-outs and billing questions without delays in communication.

Strata Owned Embedded Network Support for Residential Communities

thenrgcompany.com.au

Electricity flows through one central supply point in a strata owned embedded network. The building purchases electricity in bulk, then individual meters track usage for each apartment or tenancy. This solution can give property owners clearer oversight of consumption while keeping billing aligned with actual usage.

The NRG Company manages the operational side of this system. Residents update or transfer accounts through the support team, which handles requests without complicated steps or long wait times.

How Does Strata Owned Embedded Network Systems Work in Practice?

thenrgcompany.com.au

Strata managers typically focus on:

- Clear billing linked to actual usage
- Visibility across shared and private consumption
- Reduced energy cost through bulk purchasing
- Compliance tracking and reporting support
- Faster handling of resident account changes.

The NRG Company also works with residents on practical energy use. The team highlights everyday areas such as heating, cooling, lighting, and appliances, where consumption patterns shift over time.

The company continues to support strata communities across Sydney and NSW, with embedded network operations, resident assistance, and structured electricity management that keeps buildings running with less disruptions.
